University of Pittsburgh

University of  
Pittsburgh

Pitt

University of  
Pittsburgh

## WHAT IS PITT'S LOGO?

A logo is a graphic representation of an organization that identifies the organization in its simplest form. A logo is the primary visual link to the brand, although a logo is only one part of the overall makeup of a brand. A well-designed logo gives the viewer an instantaneous sense of connectivity to the owning organization and, eventually, a familiarization with that organization via corporate identity materials.

The University of Pittsburgh logo, which is our seal, has evolved dramatically over the past 200 years. Today, the seal/signature combination is a graphic treatment that we see and use every day. The Pitt seal/signature is the official, visual identification that links the world to the Pitt brand.

Pitt's seal has changed over time. How it came to be, how it has changed, and what it means today and moving into the future are important to know and are outlined in the pages ahead. There is

*University name circle*

*Leaf sprigs*

*Latin banner and founding date*

*Shield and crest*

One-line standard print signature and secondary text (can also use the two-line standard print signature)

Safe area at 1/2" seal size is minimum 1/8" surrounding art, which is proportionally increased as art is enlarged

Janson Regular

Helvetica Neue Bold  
(Branch Two designation)

Helvetica Neue Light  
(10 point when seal is at 1/2"  
and proportionally increased  
as signature is enlarged)

Helvetica Neue Bold

*Two-color identity*

The following are required for two-color or full-color projects:

- Pantone Matching System (PMS) 281 for blue and PMS 4515 gold for print publications and graphics and
- RGB values for Pitt blue are R=28, G=41, B=87 and for Pitt gold are R=205, G=184, B=125 for Web sites and other interactive/online media.  
(Hex codes are as follows: Pitt blue – 1c2957; Pitt gold – cdb87d.)

# Design language

Establish guidelines for UX and visual design across use experiences.

Can include design principles, aesthetics, UX principles, motion, etc.

# LIGHTNING DESIGN SYSTEM

Create the world's best enterprise app experiences.

# Animation Style Guidelines

[Getting Started](#)[Platforms](#)[Guidelines](#)[Overview](#)[Animation](#)[Gallery](#)[Style Guidelines](#)[Color](#)[Data Entry](#)[Displaying Data](#)[Layout](#)[Loading](#)[Localization](#)[Markup and Style](#)

Animation and kinetic interfaces have cognitive benefits for your users by reducing mental loads, and reducing change blindness. It has the ability to more effectively communicate content hierarchy and spatial relationships than static interfaces alone. Animation can reinforce your corporate brand and provide a steel thread experience across your platforms, devices, and form factors. Used responsibly, performant animation also provides accessibility benefits to those with reduced cognitive abilities.

## TIMING

A “grid of time” creates consistent rhythm. Animation is defined as multiples of a base grid.

## EFFECTS

Attributes are animated over time to create a vocabulary of effects.

## DIMENSION

Utilizing the Z-axis to support spatial organization aids in creating a visual hierarchy we refer to as “atmosphere”.

Loading indicators help to reassure the user that the system is actively retrieving data.

## Spinners

**Show spinners when retrieving data or performing slow computations.**

Spinners are animated SVGs or GIFs. They reduce the use of awkward white screens and blank containers to communicate that the system is working. Use spinners when a component on a page is making an asynchronous update without refreshing the page.

Center the spinner horizontally and vertically within the container. Do not place spinners directly over text or other visual elements on a page without first applying a light or dark mask.

## SUCCESS MESSAGE

### USER

Finished this week's campaign!  
Now I can enjoy the weekend.

### USER'S FEELINGS

Relief

Pride

Joy

Anticipation

### TIPS

- ✓ Pat these users on the back for getting a campaign out the door.
- ✓ They're probably feeling happy and relieved—use casual language that encourages those feelings.
- ✓ Feel free to be funny.

### MAILCHIMP

Fine piece of work!  
You deserve a raise.

## FAILURE MESSAGE

### USER

What went wrong? I really need to get this campaign out.

### USER'S FEELINGS

Confusion

Stress

Anger

### TIPS

- ✓ Offer a solution or next step.
- ✓ Be straightforward. Explain what's going on right away.
- ✓ Be calm. Don't use exclamation points or alarming words like "alert" or "immediately."
- ✓ Be serious. Don't joke around with people who are frustrated.

### MAILCHIMP

We're experiencing a problem at one of our data centers. Our engineers are on the case, and will have things back to normal shortly.

## Voice & Tone

Using the appropriate voice and tone allows us to better connect and resonate with our users. Gone are the days when our users perceive their content experience as complex, distant, or disjointed. We've evolved and we now endorse a style that should feel like a conversation between friends – personal, relatable, clear, helpful, and engaging. Conversational style does not mean sloppy writing. It means creating content in a clear, concise way that anyone can understand. It means genuinely connecting with our users.

What is the difference between voice and tone? Simply put, we have the same voice all the time, but our tone often changes. Consider this: You have one voice, but you most likely use a certain tone when you are having coffee with friends and a different tone when you are meeting with your boss.

Voice is the foundation for communicating IBM Cloud products and

### Do use active voice

To convey a more natural tone, use active voice. People tend to speak in active voice unless they have a reason not to. For example, a good reason to use passive voice is to avoid sounding judgmental or blaming the user. Consider how a statement like, “You entered the wrong value,” which is active voice, might not be a well received error message.

✓ Active voice

"In the Limits window, specify the minimum and maximum values."

✗ Passive voice

"The Limits window is used to specify the minimum and maximum values."

### Do use second person

Engage your readers by using second person (**you, your**). First person (**I, we, our**) focuses on the writer rather than the audience. People are interested in what they can do and how your story applies to their lives. One exception to this is in the case of possessive adjectives in the UI. You can use first person in headings or labels that are very specific to the user or customer data, for example “My Account” or “My Usage.” In explanatory text for the heading or label, switch to second person, for example *“Your usage is calculated from the 1st day of the month.”*

## Common Actions

### Add

Adds an existing object to a list, container, or system (for example, adding a document to a folder).

Combine Add with the object (for example, Add user, Add space, Add role, or Add privileges). Contrast with [Insert](#) and [New](#).

### Apply

Saves changes without closing the dialog. These properties often affect subsequent system behavior.

Use instead of Save Changes. Contrast with [Save](#) and [Save As](#).

### Approve

Indicates the user agrees. In a business process, typically initiates the next step.

See [Reject](#).

# Code

Establish coding style for the team.

Can include development principles,  
code architecture, etc.

# Android

Use our Android integration to style your native Android applications to be consistent with the Salesforce Lightning Design System.

The **Salesforce Lightning Design System Android Static Library** includes:

- Compiled Design Tokens
- The Salesforce Sans Font
- The Salesforce Lightning Design System Icons

## Manual Setup

The library is offered as a Bintray repository that can be pulled into any project easily via the Gradle build. See the Bintray [here](#).

## Pull in the library

# iOS

Use our iOS integration to style your native iOS applications to be consistent with the Salesforce Lightning Design System.

The **Salesforce Lightning Design System iOS Static Library** includes:

- Compiled Design Tokens
- The Salesforce Sans Font
- The Salesforce Lightning Design System Icons
- Helper Classes

While we encourage a holistic integration of the entire design system, you are free to include as many or as few of the following modules as you need in your app. Each module will import a small subset of design tokens or icons.

Design hand-off has never been easier. Generate styleguides and resources, automatically.

The screenshot displays the Zeplin 1.0 interface. At the top, there are window controls (red, yellow, green dots) and a title bar with 'Zeplin 1.0'. Below the title bar are two tabs: 'Dashboard' (highlighted in orange) and 'Guideline'. The main content area shows a design hand-off for a calendar application. The design is displayed on a grid background. The calendar header shows 'Wednesday' in large green text, with 'February 18, 2015' below it. There are navigation options for 'DAY', 'WEEK', and 'MONTH'. A yellow notification bubble with the number '1' is visible. Below the header, there are time slots: '11 AM', '12 PM', and '1'. The '12 PM' slot contains a purple event titled 'Design Meeting Hangouts'. The '1' slot contains a teal event titled 'Lunch Break'. A red circular button with a white plus sign is overlaid on the design. On the right side, there are two panels: 'Colors' and 'Assets'. The 'Colors' panel lists several color swatches with their hex and rgb values: #darkPurple (rgb 75, 64, 151), #brightTurquoise (rgb 80, 210, 194), #lemonGreen (rgb 235, 255, 198), #purple (rgb 186, 119, 255), #radikalPink (rgb 255, 51, 192), #silverGray (rgba 188, 181, 185, %30), and #white (rgb 255, 255, 255). The 'Assets' panel is currently empty. At the bottom left, there is a zoom control showing '- 200% +'. At the bottom right, there is a '+ Notes' button with a notepad icon.
