8.1.0 new stable features

- The admin/help page is more flexible so that modules and themes can add new sections, and also now lists tours.
- CKEditor includes a language toolbar button as well as support for browsers' (native) spell-checking.
- Installation profiles can again pre-select a language or modify the language-selection screen.
- Views provides a rendered entity field handler similar to the one provided by the Entity contributed module in Drupal 7.

8.1.0 new stable APIs

- Entity types can specify translatable plural labels for entities.
- There is a revision log interface to improve the developer experience for revisionable entities.
- ContentEntityBase provides field definitions for key fields, which reduces the boilerplate code needed to create content entities.
- Support for automated testing of JavaScript in core and on the DrupalCI testing infrastructure.
-

8.2.0 new stable features

- Relative URLs are automatically converted to absolute ones when content is output to an RSS feed.
- Enabled revisions by default on new node types.
- Added a redirect option to site-wide contact forms.
- Feedback is now provided after creating an entity with a link to it.
- Made it possible to select the comment view mode in the formatter form.

8.2.0 new stable APIs

- Added support for reading (GET) configuration entities as REST resources.
- Added dedicated resources for user login, logout and registration.
- Added support for selecting an authentication mechanism for a REST Export Views Display.
- Simplified REST configuration via per-resource configuration entities and an optional less verbose configuration structure for common cases.
- Added support for specifying the field item delta as part of an entity query condition.
-

8.3.0 new stable features

- Simplified and unified the views listing page so its similar to other administration listings.
-
