What is SEO?

Search Engine Optimization (or Optimizer)

- **Wikipedia definition:** the process of affecting the visibility of a website or a web page in a search engine's "natural" or un-paid ("organic") search results.
- **Webopedia definition:** a methodology of strategies, techniques and tactics used to increase the amount of visitors to a website by obtaining a high-ranking placement in the search results page of a search engine (SERP).

Less “Geek Speak”, More “English”

Basically,
SEO = how to make your site popular!

WHAT'S YOUR POINT?

SWEET!

So how do we do it?

Step 1:

Understand how search engines work.

How do Search Engines work?

Robot Engines

- Visit a web site
- Read the info
- Read the meta tags
- Follow the links on the site
- Put indexes on all the info
- Return all this info back to a central depository

Human-Powered Engines

Relies on people to submit information which subsequently gets indexed and catalogued.

Hybrids

Example:

Example:

Remember...

You're actually searching through the *index ties* that the search engine has already created. You are NOT searching the Web!

TOP SECRET

- If the algorithms were known, they would quickly collapse.
- Every site maker would effectively be spamdexing.
- Algorithms are secret.
- Algorithms change!
- Educated guess is our friend.
- Some search engines give hints!

Ingredients?

- Keywords
 - Content
 - Meta Tags
 - Title Tags
 - URLS
 - Links

Keywords!

Basics:

- Keywords are everywhere!
- Everything is text based.
- Sites with higher frequency index are typically considered more relevant.

Caveats:

- Keep your site legible.
- Avoid getting in trouble.

- *Clever Copy*
- *Headers/Nav*
- *Alt/Name tags*
- *URLs*

What is a Meta tag?

A special HTML tag that provides information about a Web page.

```
<head>
```

```
<meta name="robots" content="index,follow"/>
```

```
<meta name="Googlebot" content="index,follow"/>
```

```
<META NAME="Keywords" CONTENT="game, games, cash, competition, cash competition, tournaments, cash tournaments, prizes, cash prizes, video games, card games, word games, strategy games, arcade games, sports games, trivia, solitaire, bowling, golf, jigsaw, chess, mahjong, blackjack, backgammon, trivia, pool, wheel of fortune"/>
```

```
<META NAME="Description" CONTENT="Compete for cash and prizes in your favorite online games."/>
```

```
</head>
```

- At top, within the <HEAD> tag
- Should contain most important keywords
- 60-70 characters
- Most relevant keywords at beginning
- Don't overuse keyword
- Avoid stop words
- Should read well
- Keep it short and to the point

Links

Links

Available Flavors:

INTERAL

OUTBOUND

INBOUND

Your internal
links will
ORGANICALLY
contain
keywords!

Spiders will
follow these,
too.

Increases SEO
of whatever
content you
link to.

More on Links...

There's A LOT more to say.
Stay on top of current events!

**Yeah, if you could just,
come to the dark side,
that'd be great.**

Black Hat vs White Hat

Dishonest

Based on catching crawler attention

Examples:

- Hiding text
- “Cloaking”

Honest

Based on good marketing & site design

Examples:

- Everything we’ve mentioned so far

Takeaways

1. Play fair. The bots are smarter than you.
2. Use keywords wisely
3. Care for your links
4. Stay current!!!

Drupal SEO Checklist - What is it?

The Drupal SEO Checklist uses [Drupal SEO](#) best practices to check your website for proper search engine optimization. It eliminates guesswork by creating a functional to-do list of modules and tasks that remain. Updated regularly with the latest techniques, it makes on-page Drupal search engine optimization hassle-free.

It breaks the tasks down into functional needs like Title Tags, Paths, Content and many more. Next to each task is a link to download the module from D.o and a link to the proper admin screen of your website so that you can configure the settings perfectly.

Drupal SEO Checklist also keeps track of what has already been done. It places a date and time stamp next to each item (when you click save). That provides a simple report that you can share with others showing what's been done.

You need Drupal SEO Checklist if

How to use the Drupal SEO Checklist

Please read these instructions to get the most out of your Drupal Search Engine Optimization efforts.

Important warning

This checklist will not search engine optimize your site. It was written as a guide for Drupal SEO experts. If you need help with Drupal SEO best practices, the search engines' latest changes, your brand's target audience, or strategic marketing objectives, consider using a Drupal-specific Internet Marketing consultant like [Volacci](#) or ask your Drupal developer for a recommendation.

Getting started

Each time you open the SEO Checklist, it will look to see if any tasks have already been completed. For example, if you've already turned on clean URLs then that item will be checked. You still need to click "Save" to time and date stamp the automatically-checked items.

The best way to proceed is to start at the top and work your way through each tab until you're done, clicking save after each completed item.

how to avoid links like ?page=10

Posted by eule on December 15, 2012 at 11:59am

0 Hello, i have a panel page for the front. i look in to google via site:www.example.com he shows me urls like www.example.com/?page=10 what is wrong ..but can access and crawls the urls ...thats dc and very bad for my seo. i think this is not usefull to add urls like this to the robots.txt ...google will index it anyway. any help ?

OG URL, node ID and best practice

Posted by AdamGerthel on November 26, 2012 at 8:56pm

0 I've been investigating the og:url tag and canonical URL's tonight in an attempt to wrap my head around the best practice for this.

We've usually always use the node/NID as the canonical URL as well as the URL used for facebook likes. It seemed natural since my idea of a canonical URL is that the URL is persistent. A URL-alias changes if the node title is altered.
